

Tunnel Connections - 1000 Main Transit Superstop

Tunnel System connections via Blocks 136, 138, 139, and 256

Pedestrian Link to E. McKinney Tunnel

Pedestrian Link to One City Centre

Pedestrian Link to Foley's

Linking transit passengers at the Main Street Square Light Rail Station to the downtown tunnel system via new development at 1000 Main Street; these three pedestrian links bring multi-model continuity and convenience to the downtown commuter. Constructed in 2002 using TIRZ assistance and working with the 1000 Main/Reliant Energy Plaza project, these links further expand existing tunnel opportunities by bringing Foley's department Store into the tunnel system. At this time these significant portals provide for the only direct access into the tunnel system via Light Rail.
